D Leuchten®

M2 | Magic 2 | Two-Wire-Multi-System

M2 Magic Two Two-Wire-Multi-System

This innovative two-wire wiring system based on 24V DC with 192W max., including modulable data transfer was developed by ASMSyncrotec/D-Leuchten. It solves the problems of the furniture industry with easy pre-wiring of furniture parts. With the aid of distributors at predetermined positions, it is possible, for instance, to connect up to 7 lighting groups per distributor. But even if the use of distributors is not planned, a power supply for a consumer or a consumer group can be set up on the spot or retrofitted at a later date at any part of the cable with the aid of a wire-tap clip connector.

M2 offers you versatile smart wiring for lights and accessories such as electrically powered drawers, shutters, sliding doors or height adjustment no matter what position they are located at.

All parts connected are operated with only one power supply unit. If only lights are concerned, these can be switched and dimmed together with a common receiver or a one-way receiver. If two or more groups of lights should be switched and dimmed separately, each group will have its own receiver and be operated with not more than a 4- to 6-way remote control.

With the aid of an M2 hub and M2 distributors after the driver, our MAGIC CUBE comes into its own. With its 6 sides, it can control lights, drawers, shutters etc. singly or in groups. There are no limits to the options that can be controlled. Besides switching, dimming and flashing, mood lighting such as morning, daytime and nighttime situations can be set with just one movement of the M2 MAGIC CUBE.

This can be seen on the ZOW 2016 D-Leuchten trade fair stand.
